Engraving Feature Now Available in GB\DataEntry MTM

ENGRAVE A PART NUMBER OR TEXT ON YOUR NEXT MAZAK PROJECT

CORVALLIS, Oregon – If you need to engrave a part number or text on your next Mazak project, then take advantage of a new feature in CamLink for Windows.

Griffo Brothers Inc. released an engraving feature in its GB\DataEntry M software to assist Mazak machinists with part engraving needs. GB\DataEntry M allows you to move your powerful Mazak programming off-line, and includes drag-and-drop Mazatrol programming, Shape Check, and Tool Path Check with 3-D solids verification to ensure program accuracy. Now, in addition to all these outstanding capabilities, Mazak users can engrave all the letters of the alphabet as well as numerals zero through nine.

The new engraving feature is quick and easy to use. When you're programming Mazatrol at your PC with CamLink, simply insert a manual process. From there, you have control over:

- Selecting the tool
- Choosing to engrave on a line at any angle or around an arc
- Setting direction (clockwise or counter-clockwise)
- Justifying left, right or center
- Determining height of letter

Contact Griffo Brothers at 541.758.8421 for information on the engraving feature and to learn more about CamLink, the leading software designed to enhance your Mazak investment and improve shop floor productivity.

Expanding Possibilities Since 1984
