

GB\DataTransfer and CamLink Explorer

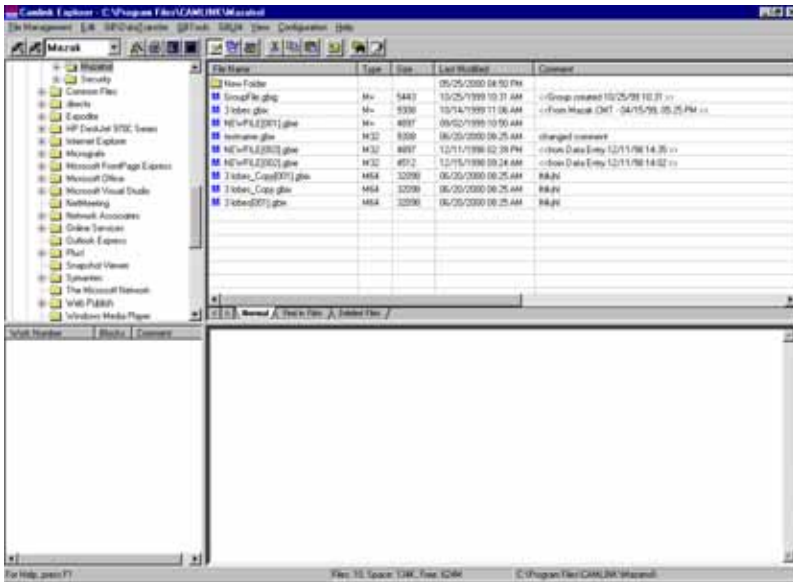

Tired of deleting programs from your Mazak, only to reprogram the same parts days later? Want to simplify your data file organization? Need to archive those infrequent but important jobs?

Then you need CamLink's GB\DataTransfer software. Designed to meet the needs of your machine shop, GB\DataTransfer allows you to upload and download program files to and from your IBM-compatible PC and Mazak.

Once at your PC, you can use CamLink Explorer to:

- Track your inventory of Mazatrol files in any data folder you choose
- Use long file names for program data files
- Rename your program file and add comment information
- Associate text or graphic information to a specific data file using Rich Comment
- Group work numbers from different data files into a new data file
- Extract one or more work numbers from a file originally saved with multiple work numbers
- Back up data files to your hard drive or onto a floppy disk for a more permanent "hard" copy

PC Requirements	Minimum	Preferred
PC	486	Pentium 200
